TITLE : PAIRED CONTAINER

ABSTRACT : PURPOSE: To provide a paired container of which the manufacturing cost is low because a puff case, being a separate body, is not required, and also, of which the using handiness is favorable.

CONSTITUTION: A paired container 1 is constituted by connecting both cylindrical bodies 4, 5 with the same internal diameter, for which the upper cylindrical body 5 is mounted on the upper end surface of the lower cylindrical body 4, with a thin hinge 6. Then, the paired container 1 is constituted of a connecting member 2 which makes both cylindrical bodies 4, 5 be fitted with a short cylinder 8 hanging from the upper cylindrical body 5 in such a manner that both cylindrical bodies 4, 5 can be opened/closed from the mounting surface with the thin hinge 6 as a pivot, a puff 11 being housed between inward flanges 3, 7 which are peripherally provided on the internal surfaces of both cylindrical bodies 4, 5, and top and bottom, a pair of bottles 12, 12 of which the bottom parts 13, 13 are fixed in a lower cylindrical part 4a of the lower cylindrical body 4 and in an upper cylindrical part 5a of the upper cylindrical body 5 respectively, and also, of which the mouth parts 14, 14 are respectively closed with plug lids 15, 15. Then, the connecting member 2 and the bottles 12 are formed of a synthetic resin material.
